SURGE PROTECTION: SAFETY & SMART USE

What a surge protector does

A surge protector helps reduce damage from voltage spikes (surges) that can affect sensitive electronics like TVs, decoders, laptops, routers, and gaming consoles. It's also designed to help with overload protection on models that include it.

Important: Surge protection reduces risk, but no plug can guarantee protection from every event (especially severe lightning/direct strikes). For storms or long periods away, unplugging is the safest option.
