RHE21

Tower PTC
Ceramic Heater

Effortless comfort, controlled your way

Effortless warmth at the touch of a button.

Experience advanced heating technology with the RHE21 Tower PTC Ceramic Heater. Unlike traditional heaters, PTC (Positive Temperature Coefficient) ceramic elements self-regulate - meaning they adjust power as the room warms up. This allows for faster heating, improved energy efficiency, and consistent warmth without extreme temperature spikes.

With 2000W max power, 2 heat settings, and 3 fan speeds, it comfortably heats spaces up to 20m². The modern tower design includes a digital display, ambient flame decoration options, and essential overheating and tip-over safety protection. Efficient. Controlled. Comfortable.
